

# European Bank Customer Analytics

## Customer Churn & Performance Dashboard — Project Report

### 1. Project Overview

This project presents an interactive customer analytics dashboard developed in Microsoft Power BI. The dashboard is designed to examine customer churn and performance using customer-level attributes and to provide a clear visual summary for business analysis and decision-making.

### 2. Project Objectives

- Analyze customer churn and identify the overall churn level.
- Monitor key customer performance indicators through an interactive dashboard.
- Compare customer behavior across geography and customer activity.
- Examine churn patterns by number of products and customer characteristics.
- Use interactive filtering to explore individual customer segments.

### 3. Tools & Technologies

| Tool / Technology  | Purpose                                                  |
|--------------------|----------------------------------------------------------|
| Microsoft Power BI | Dashboard development and interactive data visualization |
| Power BI visuals   | Charts, KPI cards, filters and geographic analysis       |
| Customer analytics | Churn and customer-performance analysis                  |

### 4. Dashboard Snapshot

The dashboard contains KPI cards and interactive visuals for customer distribution, churn rate, churned customers, geography, customer activity, number of products and demographic segments.

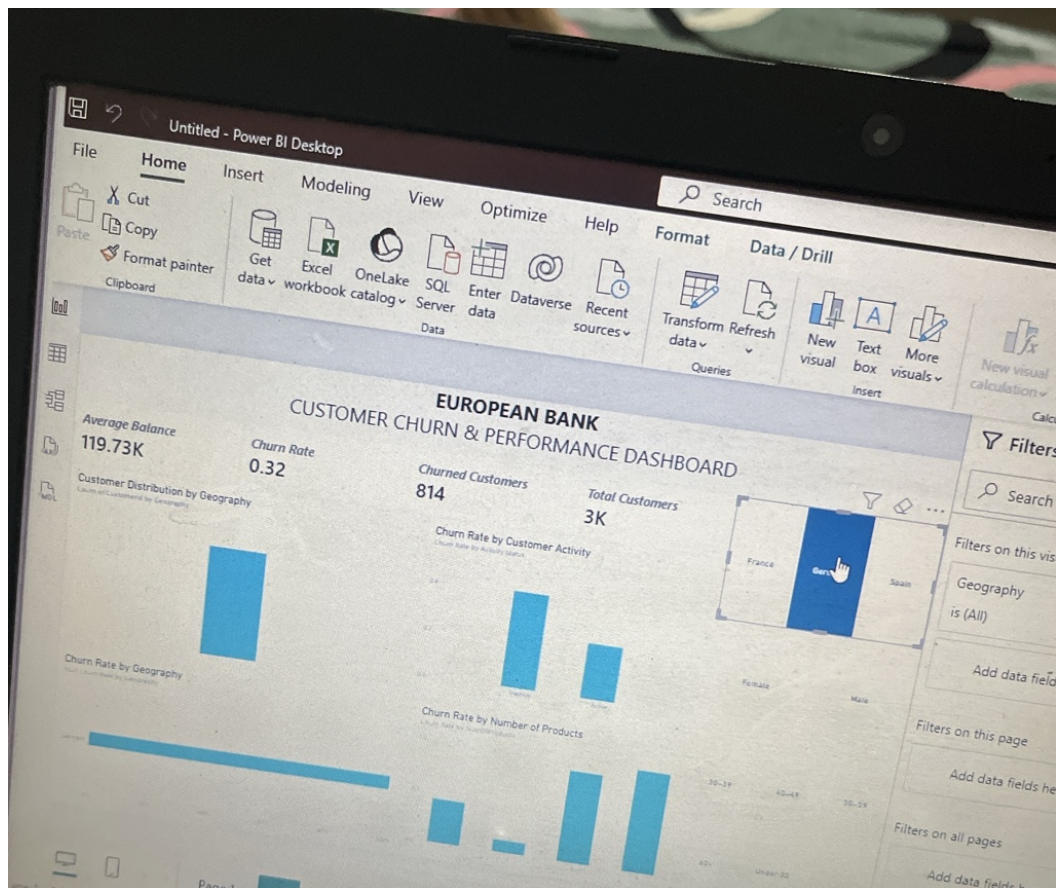

Figure 1. European Bank Customer Churn & Performance Dashboard.

## 5. Key Dashboard Indicators

| Indicator         | Value visible in dashboard |
|-------------------|----------------------------|
| Average Balance   | 119.73K                    |
| Churn Rate        | 0.32                       |
| Churned Customers | 814                        |
| Total Customers   | Approximately 3K           |

## 6. Analysis & Dashboard Features

- **Geographic analysis:** The dashboard allows customer/churn patterns to be explored by geography.
- **Customer activity:** Visuals compare churn-related patterns across customer activity categories.
- **Product analysis:** Churn is visualized by the number of products held by customers.
- **Demographic analysis:** Customer characteristics such as gender and age groups can be explored.
- **Interactive filtering:** Selecting a category updates the relevant dashboard visuals, enabling segment-level analysis.

## 7. Business Value

The dashboard provides a consolidated view of customer churn and performance indicators. Such a dashboard can support business users in monitoring churn, comparing customer segments, identifying areas requiring further investigation, and communicating data-driven findings.

## **8. Conclusion**

The European Bank Customer Analytics project demonstrates the use of Power BI to transform customer data into an interactive business intelligence dashboard. The project focuses on customer churn, customer performance, geographic patterns, activity and product-related analysis. The resulting dashboard can be used as a starting point for deeper customer-retention analysis and business decision-making.
